Supplementary File 1

Final Structure of the Reporting Template

1. Patient Characteristics

This section collects baseline demographic and reproductive information.

Proposed items for inclusion *(10 items)*:

Item 1	Age
Item 2	Anthropometric data: height, weight
Item 3	Last menstrual period
Item 4	Hormonal profile: AMH, FSH (± other relevant markers)
Item 5	Ongoing medical treatments
Item 6	Surgical and procedural history: previous hysteroscopy, cesarean section, myomectomy, conization, uterine artery embolization
Item 7	Previous infections
Item 8	Reproductive anamnesis: infertility, previous implantation failures, gravidity, parity, miscarriages/abortions (with or without dilation & curettage), preterm deliveries
Item 9	Indications for hysteroscopy: i.e. baseline examination, failed IUI, failed IVF
Item 10	Relevant imaging findings: ultrasound, MRI

2. Hysteroscopic Findings

A) Vagina, Cervix, and Cervical Canal

Proposed items for inclusion (6 items):

Item 11	Vagina: normal or abnormal (presence of longitudinal non-obstructive or obstructive septum, transverse septum, other)
Item 12	Cervical anomalies: normal, single cervix with cervical septum, double cervix
Item 13	Cervical stenosis: external uterine os, internal uterine os
Item 14	Intracervical adhesions: obstructive or non obstructive
Item 15	Cervical orientation: anteverted, axial, retroverted
Item 16	Cervical lesions (if present)

B) Uterine Cavity

Proposed items (7 items):

Item 17	Access to the uterine cavity: easy, difficult, not possible
Item 18	Cavity distension: optimal vs. non-optimal
Item 19	Wall irregularities
Item 20	Uterine orientation: anteverted, axial, retroverted
Item 21	Presence of fluid in the uterine cavity
Item 22	Morphology: normal, dysmorphic (T-, Y-shaped), unicorporeal uterus, other (I-shaped, infantilis), fundal indentation (partial or complete)
Item 23	Other: egs. presence of foreign bodies

C) Endometrial Features

Proposed items (8 items):

Item 24	Endometrial synchronicity
Item 25	Abnormal patterns: • Hypotrophic endometrium • Diffuse polypoid thickening • Focal polypoid thickening • Highly vascularized endometrium • Easily bleeding areas • Strawberry pattern • Cystic dilations of the uterine glands • Micropolyps • Stromal edema • Microcalcifications • Ulcerated areas • Crumbly consistency • Haemorrhagic cysts • Small opening on the surface • Endometrial vascular dystrophia • Endometrial compaction • Other
Item 26	Polyps: number, morphology (pedunculated, sessile), position on the uterine walls, location (fundus, corpus, isthmus), size
Item 27	Fibroids: number, FIGO classification (Type 0–Type 2), suspicious of Type 3, position on the uterine walls, location (fundus, corpus, isthmus), size
Item 28	Suspicious malignant findings: focal vs. diffuse, % of cavity involvement (<50%, >50%), extension toward myometrium/cervix

Item 29	Adhesions: site (central, lateral, cornua), extent (<1/3, >1/3, >2/3), consistency (filmy vs. dense)
Item 30	Isthmocele: location from the internal uterine os (isthmus or cervix), classification (simple niche, simple niche with one branch, complex niche), size (small, medium, large, extreme), fluid/blood retention, vascularization.
Item 31	Other findings: e.g. retained products of conception (RPOC), foreign bodies

D) Tubal Ostia

Proposed items (4 items):

Item 32	Characteristic of tubal ostia: normal or abnormal
Item 33	Presence of adhesions
Item 34	Presence of polyps
Item 35	Vascularization

Supplementary File 2

CONSENSUS OUTCOMES SUMMARY

Section	No. of Terms Proposed	Terms Approved	Terms Modified	Notes
Patient Characteristics	10	6 (60,0%)	4 (40,0%)	Suggest including hormonal profile (AMH, FSH). Suggest including ongoing medical treatments and previous infections Suggest modifying the description of reproductive history
Vagina	1	1 (100%)	0	-
Cervix and Cervical Canal	5	2 (40,0%)	3 (60,0%)	Refine the description of cervical anomalies. Add the description of intracervical synechiae Describe cervical orientation
Uterine Cavity Characteristics and Morphology	7	3 (42,86%)	4 (57,14%)	Add the description of the access to the uterine cavity Describe cavity distension and possible wall irregularities Clarification on uterine anomalies description
Endometrial Features	8	3 (37,5%)	5 (62,5%)	Add endometrial synchronicity Revision on the list of abnormal findings: (1)

				added intracavitary lesions suggestive for adenomyosis, as hemorrhagic cysts, small opening on the surface. (2) added endometrial compaction and micropolyps In the item “Fibroids” add suspicious of G3 fibroid Modify the description of isthmocele Suggest including 'Other intrauterine pathology' such as retained products and foreign bodies.
Tubal Ostia	4	2 (50,0%)	2 (50,0%)	Add vascularization characteristics and evaluation of adhesions
TOTAL	35	17 (48,6%)	18 (51,4%)
